DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sorrells et al. (U.S. Patent 6,091,940) in view of Motorola (MC1658, Voltage Controlled Multivibrator, Data Sheet, Motorola, 1997).

Sorrells et al. discloses in FIG. 12 a transmitter comprising a voltage controlled oscillator (VCO) 1204 and switch module 1214. The VCO is frequency modulated by an information signal 1202 and outputs a harmonically rich FM signal at 1216. The filter 1218 extracts the predetermined high-order harmonic component. The difference between Sorrells et al. and the claimed invention is that Sorrells et al. does not teach a VCO with a digital oscillator. Motorola teaches a voltage controlled multivibrator. One of ordinary skill in the art would have been motivated to combine the teaching of Motorola with the transmitter of Sorrells because the voltage controlled multivibrator is compact (e.g., it comes in a plastic SOIC package) and has wide frequency range (see FIG. 5). Thus it would have been obvious to one of ordinary skill in the art at the time the invention was made to use a voltage controlled multivibrator, as taught by Motorola, in the transmitter of Sorrells because the voltage controlled multivibrator is compact and has wide frequency range.

Art Unit: 2613

Regarding claim 2, Sorrells et al. teaches in FIG. 12 filter 1218 for extracting predetermined high-order harmonic component.

Response to Arguments

3. Applicant's arguments with respect to claims 1-2 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
